

Lab sheet 10.2: Data Table

Find a record in a data table

Instructions:

Textbook Chapter 10, page540

Requirement: (Textbook Chapter 10, Page 523)

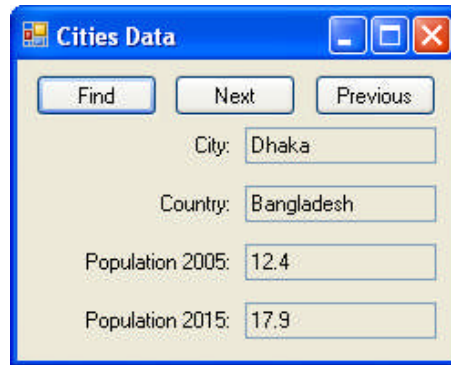

1. Modify the interface in Lab Sheet 10.1 (Add a button btnFind)

	Object	Property	Setting
	btnFind	Text	Find

2. Click Find button to location a record (Insert the code corresponding to btnFind).

Display dialog when record cannot be found

A form window titled "Cities Data" with a blue title bar and standard window controls. It contains three buttons at the top: "Find", "Next", and "Previous". Below these are four input fields: "City:" with the value "Dhaka", "Country:" with the value "Bangladesh", "Population 2005:" with the value "12.4", and "Population 2015:" with the value "17.9".

Display record when it is found
