Lab sheet 6.5: Login Checking

Requirement:

Design a simple login form to check user entered username and password is correct or not

Step1: Open VB.Net and Design a Form with the following Layout

Object	Property	Setting
frmLoginCheck	Text	Login
btnLogin	Text	Login

Step2: Write the following code in button Login

```
Dim username, password As String
Dim LoginSuccess As Boolean = False

Do Until LoginSuccess
  username = InputBox("Username Please")
  password = InputBox("Password Please")

  If username = "Peter" And password = "1234" Then
    LoginSuccess = True
  End If
Loop

MsgBox ("Login success")
```

Challenge:

Try to modify the program such than when user fail to input correct password more than 3 time, an error message will be displayed and does not allow user to try any more.
